CARING FOR YOUR SEALY

1. Don't fold your mattress. It will damage the edge support wire. 不可折疊你的床墊，這會導致邊框損壞。
2. Don't jump on your mattress. It will affect the construction of the inner spring unit and the performance of the bed. 不可在床墊上站立或跳動，這會損害彈簧結構及床墊之性能。
3. Keep your mattress clean. The use of a mattress protector is advisable. 請使用床墊護墊，確保床墊清潔。
4. Choose a good foundation. Your new mattress may appear to sag when placed on an inappropriate and/or inadequate support foundation. Sealy Torsion Bar Foundation is designed to work with your mattress to deliver the correct support and a longer mattress life. 選用適當的床架。使用缺乏支撐力的床架會導致您的床墊出現下陷。席伊麗特強支撐床架配合席伊麗床墊一併使用，為您提供最適當之承托，並使床墊更耐用。
5. When used with a timber or slat bed, the gap between the slats should be no wider than the slats themselves. It is advisable to place a layer of fabric between the slats and the underside of the mattress to protect against scuffing caused by slats frame. 使用排骨架的顧客，請注意排骨架間之距離不應大於排骨本身的寬度。我們建議你於排骨架與床墊之間擺放一布疋，避免排骨架擦損床墊表面。
6. Dry cleaning chemicals can damage some of the construction materials. 乾洗的化學用料會對床墊之材料造成損壞。
7. Regular turning of your mattress is important. The materials used in this mattress are designed to conform to your body's individual shape. BODY INDENTATIONS ARE A NORMAL OCCURRENCE. They indicate that the upholstery layers are performing as they should. Regular turning gives uniform wear to each side of the mattress, adjusts the sleeping surface evenly and prolongs mattress life. It is the purchaser's responsibility to turn the mattress in the manner specified on overleaf. 定期翻轉床墊位置是非常重要的。床墊是為了提供最貼身承托而設計，因此床墊上層出現輕微壓縮的情況是正常的。定期翻轉床墊可將身體壓力平均分散於床墊不同部位，使床墊更耐用。請依據本保用卡背面所示方法定期翻轉床墊。
